VARTA provides independent information and support for individuals, couples and health professionals on fertility, infertility, assisted reproductive treatment (ART) and the best interests of children born from ART.

About this report
The annual report is submitted in compliance with section 114 of the Assisted Reproductive Treatment Act 2008 (Vic) (the Act). The reporting period is 1 July 2015 to 30 June 2016.

The Victorian Assisted Reproductive Treatment Authority (referred to as VARTA or the Authority) was established under Part 10 of the Act. VARTA reports to the Victorian Minister for Health.

The work of VARTA and publication of this annual report is supported by funding from the Victorian Government’s Department of Health and Human Services.

Our guiding principles

VARTA's work is informed by the following guiding principles set out in the Act:

- the welfare and interests of persons born or to be born as a result of treatment procedures are paramount
- at no time should the use of treatment procedures be for the purpose of exploiting, in trade or otherwise:
  - the reproductive capabilities of men or women or
  - children born as a result of treatment procedures
- children born as a result of the use of donated gametes have a right to information about their genetic parents
- the health and wellbeing of persons undergoing treatment procedures must be protected at all times
- persons seeking to undergo treatment procedures must not be discriminated against on the basis of sexual orientation, marital status, race or religion.

Our functions

VARTA is an independent statutory authority, whose specific functions under the Assisted Reproductive Treatment Act 2008 include:

- the administration of the registration system
- public education about treatment procedures and the best interests of children born as a result of treatment procedures
- community consultation about relevant matters
- monitoring of:
  - programs and activities carried out under the Act
  - programs and activities relating to the causes and prevention of infertility
  - programs and activities relating to treatment procedures carried out outside Victoria
- promotion of research into the causes and prevention of infertility
- approval of the import or export of donor gametes or embryos formed from donor gametes into or out of Victoria, and to provide for the exemption from particular provisions under the Act
- any other functions conferred on the Authority by, or under, this or any other Act.

Our strategic priorities

VARTA's strategic priorities are to:

- meet high standards for its regulatory obligations
- provide information for the general public to inform choices about factors that impact on fertility, assisted reproductive treatment, and family formation including the best interests of children born
- increase understanding and awareness of its role to effectively promote available information
- position itself as the ‘go to’ provider of information about developments and trends in ART
- be a sought-after partner for research translation, service delivery, and public education
- enhance its contribution to developing and translating evidence
- build the sustainability of the organisation
- ensure robust and quality systems, processes and procedures
- integrate short-term funded projects into VARTA's operational activities to ensure their sustainability.

Focus of work related to these priorities is reported at a glance on pages 4-5 and expanded in the report of operations.

Our ways of working

VARTA works to:

- put the needs and rights of children who are born as a result of ART at the centre of all that it does
- support other parties involved with donor treatment and their families
- maintain independence and impartiality in what it does and how it works
- ensure that its work is informed by available and emerging evidence
- work collaboratively; seeking out relevant partnerships and relationships
- work with integrity; ensuring confidentiality where required, and sensitivity in the way messages are delivered
- monitor and evaluate its work to improve performance, value and output.
It has been a significant year for assisted reproductive treatment (ART) in Victoria. The passage of further changes to donor conception laws means that, from 1 March 2017, all donor-conceived people born from gametes donated in Victoria before 1 January 1998 will have the right to access identifying information about their donor. This brings the rights of such donor-conceived people into line with those born from gametes donated in Victoria after 1 January 1998. Although these changes mean that donor consent to release of identifying information is no longer required, they also introduce a system of contact preferences, giving these donors and donor-conceived people the right to determine if or how they have contact – including the option for ‘no contact’. Information and counselling support is also provided.

As a result of these changes, the central and voluntary donor registers will be moved to VARTA from the Registry of Births, Deaths and Marriages and VARTA will assume a key role in the information matching and donor-linking processes. From 1 March 2017, VARTA will be the ‘one door in’ provider of support and information to donors, donor-conceived people, and their families.

At a sector level, the ART industry has continued to expand, both domestically and internationally. Infertility affects approximately one in six couples of reproductive age. Many of the people opting to have ART treatment do so as a result of demographic and social factors such as rising maternal age, the incidence of conditions impacting fertility (e.g. chlamydia infection and obesity), same-sex and single women parenting, and greater community acceptance of ART. As a result, the Australian ART market continues to grow at approximately four per cent annually and is now a significant commercial sector generating approximately $500 million a year in revenue. The diversity of service offering is also expanding: in the past year, Rainbow Fertility clinics have opened in five cities around Australia to cater for the LGBTI community; while Primary IVF, establishing a low-cost operation in Victoria, adds to the low-cost/low-intervention market already in place in Victoria through Melbourne IVF.

The increasing corporatisation of the industry has been monitored by VARTA for some years, and has attracted increasing attention from the media and regulators this year. An ABC Four Corners documentary on the IVF industry provoked debate about corporate activity, with a particular focus on the expectations women in their forties may have about the likelihood of being able to conceive through use of ART. An investigation by the ACCC also examined advertising practices by IVF companies following a number of complaints. VARTA continues to closely monitor these developments, particularly the advertising of success rates, as well as providing education, information and resources to assist consumers.

Surrogacy arrangements, both nationally and internationally, have also attracted significant media attention. The overseas environment for surrogacy continues to fluctuate, with more countries restricting or closing their doors to international arrangements. As a result, people are seeking treatment in new, emerging markets, facing heightened risks and ethical challenges associated with treatment in unregulated regimes. The Commonwealth Government’s Standing Committee on Social Policy and Legal Affairs this year reviewed, and made a series of recommendations about surrogacy, which are currently under consideration by the Commonwealth Government.

This year has seen considerable changes for VARTA at a board level, with the departure of four members. Recruitment for new candidates is in progress at the time of writing. I would like to acknowledge and thank all members who have served on the board throughout the year for their significant contributions. I would also like to thank our CEO, Louise Johnson, and the VARTA staff for all their hard work and efforts during this eventful year.

Finally, I would like to acknowledge the support provided to VARTA in its work throughout the year by the Victorian Minister for Health, the Victorian Department for Health and Human Services, the Australian Government Department of Health, members of the Fertility Coalition, and other partners.

Kirsten Mander
Chairperson

In accordance with the Financial Management Act 1994, I am pleased to present the Report of Operations for the Victorian Assisted Reproductive Treatment Authority for the year ending 30 June 2016.
Much of VARTA’s focus during the 2015-16 reporting period has been on preparing for the implementation of the Assisted Reproductive Treatment Amendment Act 2016 (Vic) which is scheduled to come into place on 1 March 2017. This will include ensuring a seamless relocation of the donor registers from the Registry of Births, Deaths and Marriages to VARTA.

Preparation for legislative change has come in the wake of VARTA’s experience of planning and setting up systems in readiness for the 2014 amendments to the Assisted Reproductive Treatment Act 2008, which were enacted on 29 June 2015.

One year on from the implementation of the 2014 amendments, VARTA has put in place an evaluation framework for its Donor Register Services provision. Responses from survey participants have been positive. VARTA is currently conducting interviews with a selection of people using its services as a means of determining the best way to develop and improve service provision.

VARTA was delighted that one of its nominations for the Victorian Minister for Health Volunteer Awards was announced a winner. The award for ‘Outstanding achievement by a volunteer: innovation award’ was presented to the volunteer committee who put together the Donor conception: towards openness exhibition in June 2015. Big congratulations to committee members Kim Buck, Chloe Allworthy, Myfanwy Cummerford and Roger Clarke.

Sadly, Commonwealth funding for the Your Fertility program finished on 30 June 2016. The program’s increasing web presence is a testament to its success. During this reporting period, the Your Fertility website received three million visitors and ranked first in Google Australia searches for ‘ovulation’ and ‘fertility’. VARTA’s communications and public education staff will continue their valuable work in promoting research into the causes and prevention of infertility.

One particularly successful initiative emerging from the Your Fertility activity in 2016 was its partnership with Quit Victoria. The partnership worked to highlight the impact of smoking on fertility, pregnancy, and the health of children born, as well as the benefits of quitting with a partner. In the lead up to World No Tobacco Day 2016, Your Fertility and Quit Victoria launched an interactive online smoking and fertility tool. The tool’s launch attracted considerable media interest. It was featured on a range of television and radio stations, in the print media, and generated considerable interest on social media.

The assisted reproductive industry continues to develop a growing profile and to draw the interest of the media. While surrogacy and donor treatment attracts ongoing interest, the later part of this reporting period saw increased focus on the IVF industry.

VARTA has met the performance standards introduced through ministerial expectations for the Authority’s regulatory responsibilities. For more detailed information, please see page 8.

I would like to acknowledge the role and contribution of VARTA’s board over the course of the year, as well as the continued dedicated and professional work of its staff. VARTA is a small statutory authority; as such, it relies on the expertise of an advisory panel, a public education reference group, consumers, and a range of professionals and volunteers to deliver results. This year has been a year of significant achievement which has resulted from the efforts of so many people. We thank you all for your contributions.

Louise Johnson
Chief Executive Officer
## Performance at a glance

Focus 3

Strengthen partnerships and stakeholder engagement

Fertility Coalition audience network for the *Your fertility* program of 142,000 professionals and members of the public

3,570 likes for Your Fertility

553 @Your_Fertility followers

460 @Your_Fertility followers

Videos and films featured on the website were played 100,600 times

4.87 million pageviews of top rating page: “WOMEN’S GUIDE TO GETTING THE TIMING RIGHT”

Focus 4

Promote research, monitoring, evaluation and knowledge translation

Translation of research findings into key online brochures:

14-FOLD INCREASE in downloads of *Understanding IVF success rates* brochure on previous reporting period

FOUR-FOLD INCREASE in downloads of *Possible health effects of IVF* brochure on previous reporting period

Fertility fact sheets, revised in 2015-16, were downloaded over 12,500 times in total

Focus 5

Ensure organisational capability, capacity, compliance and sustainability

VARTA STAFF:

6.7 FTE AS AT 30 JUNE 2016

SEVEN interns from medicine, science, health promotion, embryology and law from Melbourne, Monash and Deakin Universities have expanded the breadth of work undertaken by VARTA

2 million people reached for #QuitforFertility campaign

15 other collaborative partnerships established

SIX VOLUNTEERS INVOLVED WITH EXHIBITION AND AWARD

www

3 million website users

54,500 visits within Australia

54,500 resources downloaded from the website

TWO peer-reviewed publications and 21 other publications

3 million website users

21,000 visits within Australia

54,500 resources downloaded from the website

35 presentations given
Operational and budgetary objectives and performance

VARTA met the following financial objectives for the reporting period:

- a positive ratio for assets:liabilities was maintained
- taxation and reporting obligations were met in a timely way.

Due to preparation for the implementation of the Assisted Reproductive Treatment Amendment Act 2016, preparation for the forthcoming changes to the Financial Management Compliance Framework and a decision taken to increase annual leave provisions, there were several unbudgeted expenditure items incurred during the financial year. As a result of this unforeseen expenditure, VARTA operated at a deficit of $(6,820) or (0.7)% of revenue for 2015-16 with a corresponding decrease in equity in VARTA.

Your Fertility program funding

From 1 July 2013 to 30 June 2016, VARTA received funding from the Australian Government under the Chronic Disease Prevention and Service Improvement Fund administered by the Department of Health for the Your Fertility program. Over three financial years, $611,000 (excluding GST) has been provided to the project with $207,505 (excluding GST) recognised during the 2015-16 financial year. The Fertility Coalition – Andrology Australia, Jean Hailes for Women’s Health and the Robinson Research Institute with VARTA as the lead agency – implemented the program. The grant has substantially increased the capacity of VARTA to promote research into the causes and prevention of infertility in partnership with other organisations.

The table below details a summary of financial results for the year compared with the preceding four financial years:

Focus 1

**Regulatory obligations under the Act**

Registration of assisted reproductive treatment (ART) providers

Under the Act, ART providers are required to notify VARTA when they are formally accredited by the Reproductive Technology Accreditation Committee (RTAC) of the Fertility Society of Australia. They are also required to comply with VARTA’s conditions for registration, which are reviewed annually.

A new ART provider was registered within Victoria – Primary IVF, Preston.

**Import and export of donor gametes and embryos formed from donor gametes**

Under the Act, VARTA is required to approve the import and export of donor gametes (eggs and sperm), and embryos formed from donor gametes, in and out of Victoria.

An approval granted by VARTA may apply to a particular case or a class of cases, and may be subject to conditions imposed.

The guidelines for the import and export of donated gametes and embryos produced from donated gametes were also reviewed during the year.

**Number of import and export applications involving donated gametes – 1 July 2015 to 30 June 2016**

The number of individual import and export applications received this financial year (103) was slightly more than the previous financial year (92).

There were three class applications to import sperm from a number of donors.

---

**ART providers registered to provide treatment 1 July 2015 – 30 June 2016**

- Ballarat IVF
- City Babies, Richmond
- City Fertility Centre, Bundoora
- City Fertility Centre, Melbourne
- Melbourne IVF, Box Hill*
- Melbourne IVF, East Melbourne
- Melbourne IVF, Mt Waverley
- Melbourne IVF, Werribee
- Monash IVF, Bendigo

- Primary IVF, Preston
- Reproductive Services, Royal Women’s Hospital***
  (Melbourne IVF)

---

* Blood tests, scans, counselling and doctor consultations are conducted at Melbourne IVF Box Hill. Patients managed at the East Melbourne site may attend Box Hill for the above services. Data for East Melbourne will include data for some patients attending the Box Hill clinic.

** Monash IVF, Richmond utilise laboratory facilities in Hawthorn.

*** Blood tests, scans, counselling and doctor consultations are conducted at Melbourne IVF’s low-cost centres branded as the Fertility Centre in Sunshine and Dandenong. Data for the Royal Women's Hospital will include data for some patients attending these centres.
## Ministerial statement of expectations

VARTA is required to report on ministerial statement of expectations (SOE) performance standards against VARTA’s strategic priorities for 2015-16. Performance standards have been met and full details are provided below.

### Priority 1. Ensure effective administration of the registration system for ART providers by imposing the least regulatory burden on ART providers to protect the public, consistent with the legislative scheme

| Action | Carry out regular consultation with registered ART provider designated officers and personnel in relation to the conditions for registration and other regulatory matters, providing ongoing opportunities to discuss how to minimise the regulatory burden while maintaining protection of the public.  
| Ask registered ART providers to notify VARTA promptly once Reproductive Technology Accreditation Committee (RTAC) licensing approval gained.  
| Once VARTA is aware that a new ART provider wants to operate (or an existing clinic wants to operate from a new site), discuss the date of accreditation assessment and strategies for ensuring the registration application is received in time for consideration at the next board meeting.  
| Provide regular public education events, web-based information, meetings, and information on request, giving registered ART providers opportunities to consider and discuss any issues associated with the implementation of the Act.  
| Hold a seminar on legislative change. |

| Deliverable | Registration as an ART provider approved or renewed within four weeks of gaining or renewing a RTAC licence. |

| Outcome | List of registered ART providers can be found on page 7 of this document.  
| All ART providers’ registration status updated on the website within one week of notification of re-accreditation by RTAC.  
| Application received from Primary IVF, Preston for registration approved within one week of receipt of RTAC licensing certificate.  
| Twilight seminar 2016 on legislative change held on 19 May 2016.  
| CEO attended quarterly meetings with clinic representatives. |

### Priority 2. Ensure appropriate handling of potential breaches of the Act and informing the Minister for Health in a timely manner

| Action | VARTA’s conditions for registration require registered ART providers to notify VARTA of any potential breaches of the Act. VARTA will consult, document processes and activities, and conduct thorough investigations, taking a proportionate, considered and risk-based approach to investigations – informing the Health Minister and the Department of Health and Human Services in a timely way.  
| Investigate potential breach in relation to registered ART provider consent processes with the cooperation of the provider concerned.  
| Consult with representatives from registered ART providers in relation to current practices and ways of minimising risks.  
| Communicate with the Department of Health and Human Services during the investigation. |

| Deliverable | Communication with the Health Minister about any contravention of the Act or regulations without delay, as required under section 100(2)(a) of the Act. |

| Outcome | No potential breaches of the Act notified by registered ART providers. |
## Priority 3. Ensure good regulatory practice in approving the bringing of donor gametes or an embryo formed with donor gametes into or the taking of them from Victoria

| Action | • Document policies and procedures, with guidelines and application forms available via the website.  
• Revise guidelines and forms annually and consult with providers when new circumstances or issues arise.  
• Use a checklist for board papers for each application to ensure legal requirements are met. |
|---|---|
| Deliverable | • Applications processed within a target timeline (90 per cent within five weeks).  
• Class application key performance indicator developed and met.  
• Approval letters for The World Egg Bank applications sent within two weeks of receipt of donor details. |
| Outcome | • General application target timeline exceeded, with 100 per cent of applications processed within five weeks of receipt of all information.  
• Class application form utilised by ART providers.  
• Class application key performance indicator set (90 per cent of applications considered and decisions made within five weeks of receipt of all information).  
• Three class applications received and approved within the target timeline,  
• Outcomes of decisions made in relation to applications provided on page 7. |

## Priority 4. Particularly in light of changes in the Assisted Reproductive Treatment Further Amendment Act 2014, continue to work together and co-operate with stakeholders to ensure appropriate implementation of the legislative changes

| Action | • Hold regular meetings with donor register services reference group to advise on the implementation of VARTA services with representation from donor-conceived people, donors, parents, clinic counsellors, Family Information Networks and Discovery (FIND), VANISH and the Victorian Registry of Births, Deaths and Marriages (BDM).  
• Hold regular meetings with BDM to operationalise the memorandum of understanding (MOU) to cover work in partnership with BDM. |
|---|---|
| Deliverable | • Brochures about VARTA services, standard letter content, application forms and statement forms for communicating reasons for making an application to the donor registers, which are used by VARTA and BDM.  
• MOU put into operation. |
| Outcome | • All deliverables achieved.  
• Donor Register Services operational. MOU updated in light of legislative changes and signed. |

## Priority 5. Ensure accountability and transparency in enforcement and administration of regulation by measuring performance against achieving regulatory outcomes and reviewing regulatory practices regularly (at least annually)

| Action | • Undertake organisational strategic planning with the development of an annual operational plan, incorporating SOE standards.  
• Consult with designated officers of registered ART providers.  
• Consult annually with VARTA’s advisory panel. |
|---|---|
| Deliverable | • Regulatory practices incorporated within the conditions for registration, guidelines and application forms associated with regulatory functions reviewed annually, incorporating a review of practices as well as policy.  
• Outcomes against key performance indicators, including regulatory indicators, reported within the 2015 and 2016 annual reports.  
• Report to the Health Minister on SOE standards within annual report.  
• Summary of VARTA’s strategic direction for 2014-17 published on the website. |
| Outcome | • Deliverables met. |
A snapshot from the Victorian Registry of Births, Death and Marriages (BDM) for 2015-16

This financial year has seen a closer working relationship between VARTA and BDM, based on amendments to Victorian donor conception laws enacted on 29 June 2015. The new legislation has seen a significant rise in the number of applications to the donor registers which has, in turn, resulted in much activity for both agencies.

Under the current system, applications to the donor registers are lodged with BDM, which then refers applicants to VARTA’s Donor Register Services for information and support. People contacted as a result of the application are also able to access support services from VARTA. Further information is available on page 12.

The Registrar for BDM has provided VARTA with the following data for the period to 30 June 2016 for monitoring and public education purposes.

10-woman limit for donors

In Victoria, a donor treatment procedure may not be carried out if it may result in more than ten women having children who are genetic offspring of the donor. In the past financial year, there were no notifications received from registered ART providers in relation to this limit.

Doctors carrying out artificial insemination outside of registered ART providers

Doctors carrying out artificial insemination (AI), other than on behalf of a registered ART provider, are required to notify BDM of each AI procedure and resultant pregnancies or births. There were no AI notifications from individual doctors in the past financial year.

Donor registers

BDM manages the two registers that record information about people taking part in, or born from, donor treatment: the Central Register and the Voluntary Register.

A statistical snapshot of the numbers of people who have been registered on the donor registers and who have applied for information from the Central Register and Voluntary Register – as well as some information about their applications – is provided in the following pages.

Donor registers and changes to legislation

Over the past few years, parliamentary reviews and legislative changes have affected the rights of donor-conceived people in Victoria to have access to information about their genetic heritage.

The most recent legislative amendments, passed in 2016, give all donor-conceived people, no matter when they were born, the right to know their genetic heritage. As a result, donors will no longer have the ability to prevent the release of their identifying information to their donor offspring, but will be able to determine how – or if – they have contact with an applicant. The amendments also provide for the management of the Central and Voluntary Registers to be moved from BDM to VARTA. This transition will enable VARTA to be a ‘one door in’ provider of support and information to donors, donor-conceived people, and their families. The new laws will come into effect by 1 March 2017.

These new laws build on the 2014 amendments which enabled:

- those conceived from donations prior to 1 July 1988 to obtain identifying information about their donors with donor consent, and
- those donors who donated prior to 1 July 1988 to obtain identifying information about their donor offspring with the offspring’s consent.

These amendments do not apply to donations made from 1998 where donors consented to have their identity released at the time of donation.
The Central Register

The Central Register contains information about people involved in donor treatment procedures, including the donor-conceived person, his/her parent(s) and the donor. The information is provided to BDM by the clinics where treatment occurred and also directly from parents.

The following people can apply for information from the Central Register:

- donor-conceived people
- parents of a donor-conceived person
- donors
- descendants of donor-conceived people.

The register makes it possible to exchange information between donors, parents and donor-conceived people and for them to possibly arrange to meet. This process is known as donor linking.

Currently, if records and contact details can be found, the donor will be contacted and asked to give consent to the release of identifying information for donor-conceived people conceived from gametes donated prior to 1998. Those conceived from gametes donated after 1998 can obtain identifying information about their donor on reaching adulthood, as their donor consented at the time of donation.

Registrations on the Central Register – year ending 30 June 2016

The Central Register was notified of 565 births – a third more than in the previous financial year (426).

Legislative changes enacted on 29 June 2015 resulted in pre-1988 birth records being added to the Central Register in this reporting period.

Of the 7,706 donor-conceived children registered on the Central Register, 3,107 are now 18 years or older and eligible to apply for information about their donor.

The number of applications to the Central Register has almost tripled compared to the previous reporting period (102 versus 35).

Applications to the Central Register – 1 July 2015 to 30 June 2016

</table>

* As donors may have more than one offspring, a donor may make multiple applications.
The largest number of applications was from donor-conceived people (50), followed by recipient parents (38) and donors (14 – some may have made multiple applications).

The Voluntary Register

The Voluntary Register contains information supplied voluntarily by donor-conceived people, donors and parents, making themselves available for potential information exchange or contact. Donor-conceived people, donors and parents can also use the register to exchange additional information. Family members (and descendants) can also record their wishes in relation to exchanging information with another party. In this way, links and information exchange between various parties can be facilitated.

The number of applications to the Voluntary Register (88) increased by 60 per cent compared with the previous year (55).

The total number of applications to the donor registers in 2015-16 (190) is more than double the number in the previous year (90).

Achievements

VARTA’s Donor Register Services

From 29 June 2015, VARTA implemented the 2014 legislative amendments to the Assisted Reproductive Treatment Act 2008, including developing the counselling, donor-linking and intermediary services for donor-conceived people, parents, donors and their families.

Connecting people linked by donor treatment remains a relatively new process both nationally and internationally. The new service development was informed by recommendations from the service’s reference group which includes health professionals, donor-conceived people, donors and parents.

VARTA is a pioneering agency in this area and the experience gained through its services will have lasting impact on the processes and approaches developed for use by other providers of donor-linking support services, nationally and internationally.

Information and support sessions

People who applied to the donor registers after 29 June 2015 have been referred to VARTA by BDM for an information and support session.

Following 162 referrals from BDM, VARTA provided 138 sessions during the past financial year. The session helps the applicant to think through the implications of potential contact and what this might mean for the other person. Each applicant completes a Statement of Reasons form which explains why they have applied and the short and long-term goals they have for information exchange/contact. This form is then sent to the person the applicant wants information about to help them decide whether to consent.

Support networks

Staff within the Donor Register Services work closely with all parties affected by donor conception. VARTA facilitates the Donor-Conceived Adult Network meetings for donor-conceived people held at VANISH. It also has regular contact with the Melbourne Anonymous Sperm Donors – MADMen. This group comprises men who were sperm donors for IVF programs, particularly in the 1970s and 1980s, and welcomes those from later periods as well.
Challenges

Many early donors of sperm or eggs who donated prior to 1998, donated with the understanding that their identities would remain private. In acknowledgement of this, the Assisted Reproductive Treatment Amendment Act 2016 gives these donors the right to decide if or how they establish contact with their donor offspring. Contact preferences – including a ‘no contact’ preference – will be made available both to pre-1998 donors and all donor-conceived people who are subject to applications. If a contact preference is breached, a significant fine may apply.

VARTA's experience has been that many donors are sympathetic to the needs of donor-conceived people who wish to know more about their genetic heritage. However, there are also donors with concerns about these legislative changes. VARTA encourages people who have concerns or questions to speak to one of its staff who will provide professional, sensitive, and unbiased support and information.

Looking ahead

VARTA will continue to develop its Donor Register Services, with an expected increase in demand resulting from the legislative change. The new legislation will also enable VARTA to refer to a specialised search agency if VARTA is unable to locate the subject of an application. The intent is to optimise outcomes for applicants. Results from the evaluation of the Donor Register Services from this reporting period will also inform preparations for the services under the new legislative regime, to take effect by 1 March 2017.

Service delivery

VARTA's counselling staff have significant experience in donor linking and related areas. Ongoing support is provided to applicants and those contacted as a result of the application. Staff also respond to enquiries from people thinking about lodging an application and from those considering donor treatment. They approach all parties with neutrality and respect, and maintain confidentiality at all times.

The evaluation framework for VARTA's services has been developed and approved by the Health Research Ethics Committee of the Department of Health and Human Services. Evaluation processes are underway and the results to date are positive.

Clients are asked to complete an evaluation of VARTA services once their applications have been resolved. To date, 28 responses have been received – more than 50 per cent of respondents were donor-conceived people, almost 30 per cent were parents of a donor-conceived person, the remainder being donors. All respondents have been satisfied or very satisfied with the services provided by VARTA and commended the counsellors on their professionalism, communication, understanding, and support in this sensitive area.

Further evaluation of VARTA services is currently underway and a research project is planned to evaluate the Statement of Reasons form completed by applicants.
Fertility and Assisted Reproduction: Teaching Module

VARTA and Family Planning Victoria (FPV) this year launched a ground-breaking educational resource, the Fertility and Assisted Reproduction: Teaching Module. The module expands the remit of sexuality education in schools to information about fertility, donor conception and ART – including IVF, donor conception and surrogacy.

The resource has been designed for teachers to use throughout the primary and secondary school years, adding to and improving students’ understanding of the issues as they mature.

Launched in July 2015, the module was promoted to teachers through a range of professional, government and media channels and has been well received, with almost 300 downloads since its launch.

Donor legislation public education

VARTA has been involved with a range of public relations activities to promote greater understanding of changes to donor legislation. VARTA worked closely with the team behind the ABC television Sperm Donors Anonymous documentary, which included interviews with VARTA’s Donor Register Services Manager and collaboration with their publicity team to encourage conversation about donor identity. Attracting an audience of 364,000 nationally plus 11,000 views on ABC iView, these programs helped to raise the profile of VARTA’s public education information and services. VARTA also provided considerable assistance to Fairfax’s Good Weekend Magazine for their in-depth article on donor conception.

Since the passing of new donor laws in 2016, VARTA has sought to target key audiences to inform them about legislative changes. VARTA worked with the Australian Medical Association Victoria to publish an explanatory article in its monthly publication, Vicdoc, on the changes to the law, the implications for donors, and the new services that VARTA will provide. It also worked with university alumni publications to promote this information to donors and recipient parents from the pre-1998 period.

Law Week

As part of its public education campaign on changes to donor legislation in Victoria, VARTA held the Donor conception: from anonymity to openness twilight seminar on 19 May. Run as part of Law Week 2016, and hosted in conjunction with Russell Kennedy Lawyers and La Trobe University, the evening provided a summary of the new donor laws, information about VARTA’s Donor Register Services, and an overview of donor linking. The event was well attended with an audience of 85. Feedback provided from the event was positive; in particular, participants reported an increased understanding of the process involved in donor linking and support services available. Video recording of key elements of the event has been posted on the VARTA website.

Louis Waller lecture

Parenting begins before conception was the title of the Louis Waller Lecture 2015, delivered by Professor Sarah Robertson from the Robinson Research Institute, University of Adelaide, on 3 September - timed to coincide with Fertility Week.

Addressing an audience of more than 100 people, Professor Robertson discussed her research findings; namely that lifestyle and environmental factors for both parents in the months leading up to conception can directly impact on the health of a child at birth and into adulthood, and the so-called ‘epigenetic’ mechanisms involved.
VARTA launches online exhibition
Following its successful display in June 2015, the Donor conception: towards openness exhibition has now been rehoused as an online exhibition on the VARTA website.

The online collection incorporates most of the pieces exhibited in June 2015 as well as a range of additional works that could not be included at the time. Just as the original exhibition was the first of its kind, so too is this online gallery. Importantly, this virtual gallery will not only preserve the original exhibition, but will also grow and develop as VARTA continues to accept new submissions of work.

Time to tell
The Time to tell seminar once again proved to be a successful event. For the first time, VARTA opened ticket sales with discounted early bird rates. The initiative proved popular, with the event selling out, despite VARTA increasing attendance numbers to 120 participants. This new pricing structure and increased capacity promoted greater accessibility and affordability. Audio of the highlight segment – the panel of donor-conceived people, donors and parents – is available on the VARTA website.

Media coverage
VARTA has been developing an increasing profile of its services and is regularly called on by media to provide comment, contacts or background briefing. In the reporting period, there were at least 44 separate media enquiries and 35 interview appearances. The topics of interest to the media were varied, but highlights included:

- Donor conception and donor laws: numerous articles and broadcast programs on sperm donation, changes to donor conception legislation and identity. The media coverage resulted in a significant increase in calls to VARTA’s Donor Register Services, as well as a growth in visits to the VARTA website. Egg donation practices and outcomes were also put under the spotlight throughout the year.

- IVF success rates: the ABC television Four Corners program The Baby Business provoked considerable discussion on the integrity of IVF success rate statistics, particularly for women in their forties. The program provoked a range of spin-off media enquiries and VARTA was interviewed on a number of occasions. In anticipation of the program, VARTA updated its Understanding IVF success rates brochure that saw a significant increase in downloads following its broadcast (refer to page 18).

- Egg freezing: VARTA staff members were interviewed for the ABC Radio National documentary Cold comfort: is the fertility industry misleading women?

Challenges
With its mandate to provide public education on issues concerning assisted reproduction in Victoria, one of VARTA’s tasks will be getting its messages to appropriate audiences. For example, it will be important to find ways to target and provide information to sperm donors who donated before 1998 – as well as to donor-conceived people from the same period and their parents – about changes to donor laws and VARTA’s Donor Register Services.

With the constantly changing legislative, commercial and cultural environment in relation to ART, VARTA will need to ensure that it remains responsive to enquiries and that its public education material – and particularly the website – remains up-to-date.

Looking ahead
VARTA continues to seek new ways to promote its public education messages and to maximise exposure by adopting – where resources permit – new media communications options. In particular, VARTA would like to increase its use of video messaging on social media.

With the new donor laws being a significant focus for the next reporting period, VARTA is considering providing a donor-linking seminar before the implementation of the legislation.

VARTA will continue to use its website as the primary tool of public communication and education, with an ongoing emphasis on promoting its website and online resources more widely through social media and other online media.
Focus 3

Partnerships and stakeholder engagement

Minister for Health Volunteer Award Winner

Nominated by VARTA, the volunteer committee that put together VARTA’s Donor conception: towards openness exhibition in June 2015 was this year’s winner of the Minister for Health’s ‘Outstanding achievement by a volunteer: innovation award’. The award recognised the outstanding work and commitment of the volunteer committee in creating this extraordinary exhibition which explored donor conception through art, photography and archival material, with live and original musical performances held during the exhibition opening.

The committee included Kim Buck, Chloe Allworthy and Myfanwy Cummerford, donor-conceived women who curated the art, musical and photographic elements of the exhibition, and Roger Clarke, a sperm donor from the 1980s who curated the archival section of the exhibition. In addition to the many hours that Kim, Chloe, Myf and Roger put into the creation of the exhibition, they have also given considerable time to promoting public understanding and awareness of the issues associated with donor conception.

Achievements

VARTA endeavours to forge strong collaborative relationships with a range of organisations and individuals to continue to expand its reach and share information.

Key among VARTA partnerships is the Fertility Coalition – comprised of VARTA as the lead agency, Andrology Australia, Jean Hailes for Women’s Health and The Robinson Research Institute – that has been delivering the Your Fertility program since 2011.

Your Fertility has undertaken partnership activities with the following organisations:

• Australian Practice Nurses Association (APNA)
• Diabetes Australia
• Deakin University
• Fertility Society of Australia
• Family Planning Victoria and New South Wales
• Live Lighter
• Monash University
• Quit Victoria and its national network
• Royal Australian and New Zealand College of Obstetricians and Gynaecologists (RANZCOG)
• The Obesity Coalition
• University of Melbourne
• Health websites: Health Direct, Better Health Channel, and Pregnancy Birth and Baby.

Professional development resources – active learning module and webinar

A comprehensive six-hour active learning module for health professionals, Fertility, infertility and preconception care was published by Jean Hailes for Women’s Health in 2015 and continues to be accessed by health professionals. In May 2016, a live webinar Fertility and preconception care featuring VARTA’s Senior Research Officer and Dr Raelia Lew was also delivered to their health professional network.

Your Fertility web tool

VARTA and the Robinson Research Institute worked in partnership to develop and test a ‘fertility potential’ interactive web tool. The educational tool was designed to inform individuals and couples about the modifiable lifestyle factors affecting fertility and to empower them to make timely decisions about their reproductive health. The tool was piloted by 30 test participants before launching live on the Your Fertility website. Funding opportunities to enhance the tool are being sought.

Smoking and male fertility

Andrology Australia worked closely with VARTA to promote messages around smoking and male fertility. It flagged the #QuitforFertility campaign in its Male Briefs newsletter, with a full feature article subsequently published in its magazine, The Healthy Male. Andrology Australia Director, Dr Rob McLachlan, was also featured as part of the #QuitforFertility video promotion. Additionally, activity earlier in the year by Andrology Australia prompted an in-depth article on preconception health and male fertility in The Sydney Morning Herald/The Age.
**Fertility Week 2015**

The focus for Fertility Week 2015 (1-7 September) was the impact of obesity on fertility and reproductive outcomes. The campaign aimed to make Australians aware that a small weight loss of 5-10 per cent improves fertility, increases the chances of conception and improves the health of the future child. Sponsored social media activity saw a significant audience reach of three million Australians. Partnerships with LiveLighter and Diabetes Victoria helped spread health promotion messages. Campaign videos and the annual Louis Waller Lecture on a related topic strengthened the campaign impact.

**Challenges**

VARTA is committed to working in partnership with other organisations or individuals. Partnerships have been integral to the success of the Your Fertility program. Evaluation of the Fertility Coalition, using VicHealth’s Partnerships Analysis Tool, showed it to be an effective and successful partnership.

**Looking ahead**

Commonwealth funding for the Your Fertility program finished on 30 June 2016. VARTA will continue to promote research findings about factors affecting fertility. Sourcing funding for specific project work will remain a priority.

---

**#QuitforFertility campaign with Quit Victoria**

In recognition of World No Tobacco Day on 31 May, Your Fertility collaborated with Quit Victoria to spread the word on the impact that smoking can have on a person’s fertility and their chance of having a healthy child at birth and into adulthood.

The #QuitforFertility social media campaign was launched with the release of an interactive online tool on 23 May. The tool, co-produced by Your Fertility and Quit Victoria, and the accompanying campaign attracted television, radio and print news coverage. Coverage on Channel 10 Eyewitness News, 7News, The Herald Sun newspaper and a number of commercial radio stations combined to create a total audience reach of two million people. Articles also appeared in the Medical Observer, APNA’s Primary Times, the Northern Health Network’s Your Local Health News, Andrology Australia’s The Healthy Male magazine, and the HealthDirect partner news.

The online tool was developed with Quit Victoria to highlight the benefits of quitting smoking from preconception, pregnancy, to birth and beyond. The tool can be found on both the Your Fertility and Quit Victoria websites, and was accessed 2,244 times collectively throughout the campaign period. The tool will continue to be available on the Your Fertility website.

Social media activity ran throughout the campaign period in the lead up to World No Tobacco Day, with messages reaching over 137,920 Australians and engaging up to 46,000. Five key messages, including two animated images, were delivered and shared by Quit Victoria, Fertility Coalition partners and the Better Health Channel. In addition, a series of videos highlighting smoking and fertility was launched on the Your Fertility website. Within the campaign period, the videos were played approximately 300 times in total.
Focus 4

Achievements

**Co-investigators on NHMRC grants**

VARTA staff are co-investigators on three grant applications to the National Health and Medical Research Council (NHMRC). To date, one of these, led by Professor Jane Halliday from the Murdoch Childrens Research Institute, has been successful and the research has begun; **Clinical review of a cohort aged 22-33 years conceived using Assisted Reproductive Technologies** is an investigation of the health and development of IVF-conceived adults.

The outcome of the other two, **Eggsurance?** - The evaluation of a Decision Aid (DA) for women considering non-medical egg freezing led by Professor Martha Hickey at the University of Melbourne and **Empowering couples to choose the right in vitro fertilisation procedure for a healthy baby: a population study of cumulative live births and cost-effectiveness of intracytoplasmic sperm injection (ICSI)** led by Dr Alex Wang at University of Technology Sydney (UTS), will be known by the end of the year.

In the later study, VARTA will work with Dr Wang to translate research findings into the cost-effectiveness of ICSI, using data collected by VARTA. The knowledge gained will help couples decide which ART treatment procedure they use.

**FSA fact sheets translation for the general public**

In partnership with the Preconception Health Special Interest Group of the Fertility Society of Australia (FSA), VARTA has translated fact sheets for the general public highlighting factors that influence fertility and the outcomes of assisted reproductive treatment. The fact sheets were originally developed for health professionals. The FSA has supported the development of the resources.

**FPV fact sheets**

Fact sheets on fertility, infertility and assisted reproductive treatments were prepared for Family Planning Victoria (FPV). These resources aim to address a resource gap in the information delivered to people of reproductive age who are seeking FPV’s advice about starting a family.

**ART success rates**

In light of the increasing complexity of ART treatment and recent media attention regarding how IVF success is presented, VARTA, in collaboration with experts in the field, rewrote and launched the **Understanding IVF success rates** brochure. The newly released brochure has been well received by health professionals and the general public, with a 14-fold increase in the number of downloads compared to the previous financial year.

**PCOS information**

In collaboration with Dr Helena Teede, Monash University, and Professor Roger Hart, University of Western Australia, new information on polycystic ovarian syndrome (PCOS) management and the optimisation of fertility was developed and released online on the VARTA and Your Fertility websites in August 2015.

**Possible health effects of IVF brochure**

This is the most frequently used VARTA resource. After a thorough review of the literature and in consultation with experts in the field, this brochure was updated to reflect the current state of knowledge about possible health effects of IVF.

**Annual report data collection**

In collaboration with the University of Technology Sydney (UTS) and in consultation with registered ART providers, VARTA has revised treatment outcome data tables for the annual report. Changes were necessary to capture treatment outcomes associated with changing practices including the freezing of all embryos created and the use of cryopreserved eggs. It is increasingly likely that embryos or eggs are frozen for treatment at a later stage. The increasing use of cryopreserved eggs to form embryos is shown in table 2.5a, page 42. Given the significant impact of the woman’s age on treatment outcomes, data tables have been also revised to provide outcomes for different age groups of women treated.

**Challenges**

The way in which ART providers determine and present success rates continues to be debated within the industry and to cause confusion for the general public. VARTA will continue to explore ways to communicate information about success rates with the general public.

**Looking ahead**

With changes in practices involving preimplantation genetic diagnosis (PGD) and preimplantation genetic screening (PGS), the **What is preimplantation genetic diagnosis?** brochure has undergone major rework and will be titled **Understanding genetic testing of embryos**. In developing this new version, experts in the field have been providing input and feedback.

With the expansion in the number of women undergoing genetic testing (38 per cent increase for PGD and 125 per cent for PGS on the previous financial year), it will be important for VARTA to continue to monitor activity and provide information for the general public. Data is provided on pages 34 and 52.
Monitoring

Clinic data trends
The data in this report shows an 8.2 per cent increase in the overall number of treatment cycles and a 7.1 per cent increase in the number of patients, compared with the past financial year (see figure 1).

Figure 1  Number of patients and treatment cycles per financial year 2008–09 to 2015–16

![Graph showing number of patients and treatment cycles per financial year.](image)

Note: AI was not reported for 2008-09. 2008-15 data is from the final outcome data. 2015-16 data is from the treatment data.

Treatment cycles
Final 2014–15 pregnancy outcomes data was updated in August 2016. 0.5 per cent of 2014–15 pregnancies (20 of 4,140) had unknown outcomes.

There has been no significant change in the proportion of women treated within each age bracket (see figure 2).

Single women continue to be the largest proportion of women treated with donor sperm (50 per cent), followed by women in same-sex relationships (35 per cent) and heterosexual relationships (15 per cent).

Expansion in IVF services

New customer segments
In the past year, low-cost IVF services have expanded nationally with the establishment of Sydney-based Primary IVF in Preston, Victoria. This provider adds to the existing presence of Fertility Centre clinics in Sunshine and Dandenong, affiliated to Melbourne IVF. Other low-cost IVF centres established by Monash IVF include BUMP in Sydney and MYIVF in Brisbane.

City Fertility Centre has launched five Rainbow Fertility centres nationally, including Melbourne. These centres cater exclusively for the LGBTI community.

New territories
Monash IVF’s activities have expanded with additional partnership clinics in Australia and Malaysia. Virtus Health (which includes Melbourne IVF) also expanded with fertility clinics in Singapore and Ireland.

- Bourne K, invited speaker, _Donor conception and surrogacy practice in Australia_, International Social Services Conference.

**Abstracts presented at conferences**
**Focus 5**

**Organisational capability, capacity, compliance and sustainability**

**Achievements**

VARTA has hosted seven interns in the past year from the fields of medicine, health promotion, embryology and law from Melbourne, Monash and Deakin universities. Projects have included:

- involvement with social marketing campaigns focused on the impact of age, lifestyle and timing of intercourse on a person’s capacity to conceive and have a healthy baby
- a webinar presentation for health professionals on fertility produced by Jean Hailes for Women’s Health for Your Fertility
- involvement with the review of brochures such as *Understanding IVF success rates*
- media involvement in a campaign to highlight the impact of smoking on fertility
- a review of *Your Fertility* website content to ensure all information is informed by evidence and up-to-date
- involvement in the preparation and evaluation of *Fertility Week* and twilight seminars
- environmental scanning of IVF clinic websites’ content on success rates and genetic testing of embryos
- updating of comparative information about features of ART legislation across Australia
- planning for testing key *Your Fertility* messages to reach university students via a postcard in medical centres and cafes.

**Challenges**

Preparing for sensitive legislative changes while maintaining momentum with current responsibilities is always challenging. Weekly planning sessions have been established to prioritise all aspects of current work.

**Looking ahead**

VARTA will continue to seek opportunities for interns to be involved in its public education program. With the implementation of further legislative changes from 1 March 2017, new staff will need to be recruited for management of the donor registers and associated services. Maintenance of the staffing involved with communications and public education will ensure that the promotion of research associated with fertility and infertility can continue. It will also be crucial for the dissemination of information associated with these issues.

**Dr Raelia Lew**

Dr Raelia Lew, a fertility specialist with a passion for women’s health, is working with VARTA throughout 2016 as part of attaining a certification in reproductive endocrinology and infertility from the Royal Australian and New Zealand College of Obstetricians and Gynaecologists. Raelia has made a significant contribution to the work of the *Your Fertility* program and VARTA since joining us in January 2016. Raelia was involved in developing *Your Fertility’s* #QuitforFertility campaign, delivered in partnership with Quit Victoria (refer to page 17), that coincided with World No Tobacco Day on 31 May. Raelia’s expertise has been utilised in the development of information for VARTA’s website and patient information resources, and in the delivery of a webinar for health professionals on preconception health and fertility (refer to page 16). Raelia has contributed to many initiatives and events and we look forward to what she will accomplish during the remainder of her time with VARTA.

**Isabelle Purcell**

During her internship at VARTA, Isabelle, a Deakin University health promotion student, made a significant contribution and was a valuable part of the team. She assisted the VARTA team in many ways but, most importantly, undertook a systematic desktop audit to assess the quality of the information about chances of success available on the websites of ART providers in Australia and New Zealand. She found that most clinics’ information is non-specific and difficult to interpret. This work will be presented at the FSA Annual Conference, to be held 4-7 September 2016, where it is hoped that it will spark debate about how clinics can improve the way they explain the chances of ART success to their patients to allow them to make more informed decisions about treatment.
Additional information

In compliance with the requirements of the Standing Directions of the Minister for Finance, further details of activities described in this annual report are available to relevant ministers, members of parliament and the public on request. A disclosure index is provided on page 71, to facilitate identification of the Authority’s compliance with statutory disclosure requirements.

Data integrity

ART treatment outcome data is collected from registered ART providers directly by VARTA and by the University of Technology Sydney (UTS). In addition, data is collected from the Victorian Registry of Births, Deaths and Marriages for public education and monitoring purposes. Consistent with the DataVic Access Policy issued by the Victorian Government in 2012, the information on treatment data included in this annual report will be made available at www.data.vic.gov.au in machine readable format.

Environmental performance

VARTA divides waste into recyclable, organic and landfill waste in conjunction with other statutory authorities housed at 570 Bourke Street, Melbourne. Double-sided photocopying reduces the use of paper in the office.

Freedom of Information

VARTA received no freedom of information requests in this financial year.

Insurance

Details of consultancies (under $10,000)

In 2015-16, there were three consultancies where the total fees payable to the consultants were less than $10,000. The total expenditure incurred during 2015-16 in relation to these consultancies is $14,515 (exclusive of GST).

Consultancies

Details of consultancies (under $10,000)

In 2015-16, there were three consultancies where the total fees payable to the consultants were less than $10,000. The total expenditure incurred during 2015-16 in relation to these consultancies is $14,515 (exclusive of GST).

Occupational health and safety

An occupational health and safety audit was organised in relation to a staff member’s home office in February 2016 to identify any improvements that could be made to support her ‘working from home’ environment. Advice received was used to make adjustments as necessary.

Protected Disclosure Act 2012

No disclosures have been notified to the Authority or forwarded to the Independent Broad-Based Anti-Corruption Commission, Victoria (IBAC).

Risk management

I, Louise Johnson, Chief Executive Officer, certify that the Victorian Assisted Reproductive Treatment Authority has complied with the Ministerial Direction 4.5.5 – Risk Management Framework and Processes. The Authority Audit Committee has verified this.

I also certify that the Authority has risk management processes in place consistent with the AS/NZS ISO 31000:2009 and an internal control is in place that enables the executive to understand, manage and satisfactorily control risk exposures. The Board verifies this assurance and that the risk profile of the Authority has been critically reviewed within the last 12 months.

Melbourne 31/08/16

[Signature]

I, Louise Johnson, Chief Executive Officer,
The Minister for Health nominates the members of the Authority and the appointments are made by the Governor-in-Council. Section 101 of the Act states that in making nominations to the Governor-in-Council, the Minister must have regard to the need for diversity and expertise.

The following is a list of membership during the 2015-16 financial year.

**Kirsten Mander**
Chairperson
Kirsten is an experienced director, business woman and lawyer. She has an extensive background as a senior executive and general counsel of a number of Australia’s top companies, including Australian Unity, Sigma Pharmaceuticals, TRUenergy and Smorgon Steel Group. She currently serves on a number of boards, including Swinburne University, the International Women’s Development Agency and the Consultative Council for Clinical Trials Research. Formerly she was Ethics Committee Chair of the Law Institute of Victoria and Victorian President of the Australian Corporate Lawyers Association. She is a fellow of the Australian Institute of Company Directors and the Governance Institute of Australia.

**Margaret Coady**
Term expired: 31 March 2016
Margaret is a member of the Centre for Applied Philosophy and Public Ethics, and a member of the Youth Research Centre, both at the University of Melbourne. She is also a foundation member of the Victoria Police Human Research Ethics Committee. She has been a consultant on codes of ethics to a number of professional organisations, including the Royal Australian and New Zealand College of Psychiatry and the Australian Association of Social Workers. She has published on children’s rights and professional ethics both in academic journals and in more popular press.

**David Edgar**
Term expired: 14 May 2016
David is Scientific Director of Melbourne IVF and Reproductive Services at the Royal Women’s Hospital. He is also an Associate Professor in the Department of Obstetrics and Gynaecology at the University of Melbourne. He was a member of the Infertility Treatment Authority from 2004 until it was replaced by VARTA in 2010, and has also served on the Royal Women’s Hospital Human Research and Ethics Committee and on the Reproductive Technology Accreditation Committee. He has lectured and published widely in the areas of reproductive biology and human embryology.
**Authority committees**

Section 113 of the Act provides that the Authority may set up one or more committees, comprised of members of the Authority.

Twelve full board meetings of the Authority were held between 1 July 2015 and 30 June 2016.

Committees established are:

- **Finance, Audit and Risk Management Committee**
  Chair: David Edgar
  Members: Victoria Heywood, Katrina Harkess
  Number of meetings held: three.

**Nomination and Remuneration Committee**

Chair: Kirsten Mander
Members: Jennifer Jarman
Number of meetings held: one.

**Working groups**

Ad hoc working groups are established when required.

---

**Katrina Harkess** not pictured

Term expired: 31 March 2016

With a background in IT, Katrina has held a number of roles in the medical and security industries. A part-time student and full-time single parent of three donor-conceived children, she is actively involved in the parents of donor-conceived children community.

**Victoria Heywood**

Term expired: 22 July 2016

Victoria is the mother of a donor-conceived child and has a background in journalism, communications and copywriting. As well as writing for numerous Australian and international publications on health, relationships and food, she is the author of 31 adult non-fiction books.

**Jennifer Jarman**

Term expired: 14 May 2016

Jennifer is a midwife, lactation consultant, and childbirth educator with Frances Perry House private hospital. She was a member of the Royal Women’s Hospital board prior to relocating to London where she completed a Masters degree in Health Policy, Planning and Financing at the University of London. She also served on the Committee of Management of the Centre Against Sexual Assault (CASA).

**Nicki Mollard**

Term started: 2 February 2016

Nicki’s area of expertise is where the law, medicine and ethics intersect. She has a Masters degree in Bioethics from the Centre for Human Bioethics and published a first class thesis on the regulation of IVF in Victoria. Nicki is a barrister practicing in health law with particular interest in medical negligence, professional disciplinary matters and public health. Nicki is also a nationally accredited mediator. Nicki has researched and taught law at Monash University in the faculties of law and medicine, nursing and health sciences at undergraduate and postgraduate level for 15 years. Nicki is a former board member of the Victorian Cytology Service.
Executive structure

VARTA’s Chief Executive Officer is Louise Johnson. Louise has an Honours degree in Microbiology, postgraduate qualifications in management and education, a Masters of Regulatory Studies and is a graduate of the Australian Institute of Company Directors. Louise is a community member of the Occupational Therapy Board of Australia, past member of the NHMRC Embryo Licensing Committee, and past chairperson for Women’s Health Victoria. She is supported by staff members and contractors.

VARTA staff – front row (l-R): Karin Hammarberg, Louise Johnson, Kate Bourne, Ellen Crocker.

Advisory panel

VARTA has established an advisory panel to contribute to its work on a voluntary basis. Membership is reviewed annually. Members of the panel are published on the VARTA website: www.varta.org.au
This report outlines the procedures carried out for registered ART providers under the Assisted Reproductive Treatment Act 2008. Data is provided on a financial year basis (between 1 July 2015 and 30 June 2016) as required under the Act.

ART treatment outcome data is collected from registered ART providers directly by VARTA and by the Faculty of Health, University of Technology Sydney (UTS). The data is collected retrospectively. The following dates indicate when the latest updates were provided:
- 16/08/2016 Ballarat IVF
- 18/08/2016 City Fertility Centre
- 18/08/2016 City Babies
- 23/08/2016 Melbourne IVF
- 23/08/2016 Monash IVF
- 19/08/2016 Primary IVF

Pregnancy outcomes for each unit will only have been recorded up to these dates. Figures do not include all clinical pregnancies, only those with ultrasound scan available before the above dates.

**How to read the data**

This report includes all forms of assisted reproductive treatment (ART) cycles and artificial insemination (AI) using either partner sperm or donor sperm. Cycles involving; purely egg or embryo movement; embryo disposal; cancelled prior to follicle stimulating hormone (FSH) stimulation; or prior to thawing the egg or embryo, are not included.

Where a woman may have treatment at more than one treatment site, the information is presented per registered ART provider. Elsewhere, details of each treatment site for a registered ART provider are shown.

The following diagram explains the ART process to help readers better understand the data reported.

---

### Understanding the ART process

#### The IVF and ICSI process

<table>
<thead>
<tr>
<th>Stage</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hormone stimulation</td>
<td>Fertility drugs are given to develop a number of eggs (stimulated cycle). In a natural cycle, no superovulatory drugs are used.</td>
</tr>
<tr>
<td>Egg retrieval</td>
<td>Eggs are collected.</td>
</tr>
<tr>
<td>Embryo development</td>
<td>In IVF, sperm is added to the eggs and, in ICSI, a single sperm is physically injected into each egg for the for embryos to develop. Sometimes more than one embryo develops that is suitable for transfer.</td>
</tr>
<tr>
<td>Embryo transfer</td>
<td>An embryo is placed in the uterus where it may implant and grow into a baby. When there are several embryos available for transfer, most commonly one is transferred and the remainder frozen for later use if there is no pregnancy. Sometimes, all embryos are frozen.</td>
</tr>
<tr>
<td>Clinical pregnancy</td>
<td>A pregnancy is verified by ultrasound at approximately six to seven weeks into the pregnancy. A clinical pregnancy does not guarantee the birth of a baby, as some pregnancies miscarry.</td>
</tr>
<tr>
<td>Live birth</td>
<td>The birth of a living baby or babies (multiple births are classed as a single live birth). Collection of this data can be slow because the clinic has to wait until a baby is born to count him or her as part of the clinic’s success rate.</td>
</tr>
</tbody>
</table>

1. Single embryo transfer (transferring one embryo at a time) is considered the gold standard of practice in IVF to minimise the risk of multiple pregnancy which are associated with higher risk to both mother and babies.

#### The AI process

<table>
<thead>
<tr>
<th>Stage</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Egg development</td>
<td>One or two eggs are developed with or without the use of fertility drugs.</td>
</tr>
<tr>
<td>Monitoring</td>
<td>Ultrasound scans and blood tests are used to determine the right time to have the insemination.</td>
</tr>
<tr>
<td>Insemination</td>
<td>Partner or donor sperm is placed in the uterus just before ovulation.</td>
</tr>
<tr>
<td>Clinical pregnancy</td>
<td>A pregnancy is verified by ultrasound at approximately six to seven weeks into the pregnancy. A clinical pregnancy does not guarantee the birth of a baby, as some pregnancies miscarry.</td>
</tr>
<tr>
<td>Live birth</td>
<td>The birth of a living baby or babies (multiple births are classed as a single live birth). Collection of this data can be slow because the clinic has to wait until a baby is born to count him or her as part of the clinic’s success rate.</td>
</tr>
</tbody>
</table>

---

### Data reporting and success rates

The data presented here cannot be used to compare success rates between ART procedures and between treatment sites.

ART clinics in Victoria practice differently in terms of patient selection and use of laboratory techniques. When considering clinic success rates, personal circumstances and medical history must be taken into account in estimating an individual’s chance of having a baby.

The age of the woman treated, the stage of the embryo transferred (blastocyst or 2-3 day stage embryos), the use of fresh and/or thawed embryos, the type of infertility problem, lifestyle of the women treated, population of women receiving treatment at a particular clinic and other factors will impact on success rates.

The information on intention to treat is not available in the VARTA data.

It is not correct to compare the efficacy between ART procedures since cancelled cycles and others factors are not taken into consideration.

Therefore, the data reported here only presents number of cycles, type of ART procedures, number of pregnancies and number of births, not the success rates.
Final outcomes for treatment cycles commenced in 2014-15 financial year

This section includes a final outcome of treatment procedures undertaken in 2014-15. These final figures were not available at the time of the production of the 2015 Annual Report.

**Legend** (for full glossary, refer to page 70)

- **Birth**
  - A birth event – the delivery of a baby or babies

- **Live birth**
  - Birth of a living baby or babies (multiple births are classified as a single live birth)

- **Babies born**
  - Includes liveborn and stillborn

- **Liveborn babies**
  - A baby that is born alive

- **Age at the first treatment**
  - Age is based on the cycle date – either the first date where FSH/stimulation drug is administered, or the date of last menstrual period (LMP) for unstimulated cycles (including natural fresh cycles and thaw cycles)

- **Clinical pregnancy**
  - A pregnancy verified by ultrasound at six/seven weeks gestation. A clinical pregnancy does not guarantee the birth of a baby, as miscarriages can occur. Women can have more than one clinical pregnancy in a financial year

- **Thawed**
  - Cryopreserved/frozen eggs, sperm or embryos must be thawed prior to transfer

</table>

**Note:** Aggregate percentages have been calculated using total numbers within the treatment dataset. For example, the percentage of single embryo transfer was calculated as the total number of cycles with single fresh embryo transferred as a proportion of the total number of cycles with fresh embryo transferred.

**Legend** (for full glossary, refer to page 70)

- **Birth**
  - **A birth event** – the delivery of a baby or babies
- **Live birth**
  - Birth of a living baby or babies (multiple births are classified as a single live birth)
- **Babies born**
  - Includes liveborn and stillborn
- **Liveborn babies**
  - A baby that is born alive
- **Age at the first treatment**
  - Age is based on the cycle date – either the first date where FSH/stimulation drug is administered, or the date of last menstrual period (LMP) for unstimulated cycles (including natural fresh cycles and thaw cycles)
- **Clinical pregnancy**
  - A pregnancy verified by ultrasound at six/seven weeks gestation. A clinical pregnancy does not guarantee the birth of a baby, as miscarriages can occur. Women can have more than one clinical pregnancy in a financial year
- **Thawed**
  - Cryopreserved/frozen eggs, sperm or embryos must be thawed prior to transfer

### Table 1.7  Outcome for preimplantation genetic diagnosis and screening, 2014-15 financial year

PGD is used for patients with a known genetic risk. PGS is used for the detection of numerical chromosome abnormalities.

PGD IVF/ICSI and thaw cycles may be initiated with the aim of freezing all embryos (no embryos transferred).

<table>

</tbody>
</table>

PGS: preimplantation genetic diagnosis; PGS: preimplantation genetic screening.

* Either fresh embryos or thawed frozen embryos may be tested. Some patients will have some fresh and thawed frozen embryos tested.
ART procedures, 2015–16 financial year

This section provides ART treatment and clinical pregnancies for the 2015-16 financial year. As pregnancies are ongoing, some outcomes are not known at the time of this report going to print.

Preimplantation genetic diagnosis and screening, 2015-16 financial year

Embryo transfer could occur in a different financial year to PGD/PGS testing. For final outcome, refer to table 1.7 in next year’s Annual Report. PGD IVF/ICSI and thaw cycles may be initiated with the aim of freezing all embryos (no embryos transferred).

* Either fresh embryos or thawed frozen embryos may be tested. Some patients will have some fresh and thawed frozen embryos tested.

PGD is used for patients with a known genetic risk. This can include sex selection to identify a specific genetic condition affecting one gender. PGS is used for the detection of numerical chromosome abnormalities.

For more information about these techniques, please read VARTA's Understanding genetic testing of embryos brochure, available at varta.org.au
Accountable officer’s and member of responsible body’s declaration

The attached financial statements for the Victorian Assisted Reproductive Treatment Authority have been prepared in accordance with Direction 4.2 of the Standing Directions of the Minister for Finance under the Financial Management Act 1994, applicable Financial Reporting Directions, Australian Accounting Standards including Interpretations, and other mandatory professional reporting requirements.

We further state that, in our opinion, the information set out in the comprehensive operating statement, balance sheet, statement of changes in equity, cash flow statement and accompanying notes, presents fairly the financial transactions during the year ended 30 June 2016 and the financial position of the Victorian Assisted Reproductive Treatment Authority at 30 June 2016.

At the time of signing, we are not aware of any circumstance which would render any particulars included in the financial statements to be misleading or inaccurate.

We authorise the attached financial statements for issue on 9 September 2016.

The accompanying notes form part of these financial statements
NOTE 1: STATEMENT OF SIGNIFICANT ACCOUNTING POLICIES

(a) Statement of compliance

This general purpose financial report has been prepared in accordance with Australian Accounting Standards (AAS), including Australian Accounting Interpretations, other authoritative pronouncements of the Australian Accounting Standards Board and the Financial Management Act 1994. The financial report also complies with relevant Financial Reporting Directives (FRD) and relevant Standing Directions (SD) authorised by the Minister for Finance.

The financial report of the Victorian Assisted Reproductive Treatment Authority (the Authority) as an individual entity complies with the Australian equivalents to International Financial Reporting Standards (A-IFRS).

The Authority is a not-for-profit entity and therefore applies, where relevant, the additional paragraphs applicable to ‘not-for-profit’ entities under AAS.

The following is a summary of the material accounting policies adopted by the Authority in the preparation of the financial report. The accounting policies have been consistently applied, unless otherwise stated.

The annual financial statements were authorised for issue by the Board of the Authority on 9 September 2016.

(b) Basis of preparation

This financial report has been prepared on an accruals basis and is based on historical costs, except for the revaluation of certain non-current assets, for which the fair value basis of accounting has been applied.

In the application of AAS, management is required to make judgments, estimates and assumptions about the carrying values of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgments. Actual results may differ from these estimates.

Consistent with AASB 13 Fair Value Measurement the Authority determines the policies and procedures for recurring fair value measurements such as plant and equipment, and for non-recurring fair value measurements such as non-financial physical assets held for sale, in accordance with the requirements of AASB 13 Fair Value Measurement and the relevant FRDs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

- Level 1 – Quoted (unadjusted) market prices in active markets for identical assets or liabilities
- Level 2 – Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable
- Level 3 – Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable.

For the purpose of fair value disclosures, the Authority has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above.

In addition, the Authority determines whether transfers have occurred between levels in the hierarchy by reassessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

The Valuer-General Victoria (VGV) is the Authority’s independent valuation agency.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision, and future periods if the revision affects both current and future periods.

Accounting policies are selected and applied in a manner which ensures that the resulting financial information satisfies the concepts of relevance and reliability, thereby ensuring that the substance of the underlying transactions or other events is reported.

The accounting policies set out below have been applied in preparing the financial report for the year ended 30 June 2016, and the comparative information presented in these financial statements for the year ended 30 June 2015.

(c) Cash and cash equivalents

Cash and cash equivalents comprise cash on hand and cash at bank, deposits at call and highly liquid investments with an original maturity of 3 months or less, which are readily convertible to known amounts of cash and are subject to insignificant risk of changes in value.

(d) Receivables

Trade debtors are carried at nominal amounts due and are due for settlement within 30 days from the date of recognition. Collectability of debts is reviewed on an ongoing basis, and debts which are known to be uncollectible are written off. A provision for doubtful debts is raised where doubt as to collection exists.

(e) Plant and equipment

Plant and equipment is initially recognised at cost and subsequently measured at fair value less accumulated depreciation and impairment. Depreciated historical cost is generally a reasonable proxy for depreciated replacement cost because of the short lives of the assets concerned.

More details about the valuation techniques and inputs used in determining the fair value of non-financial physical assets are discussed in Note 10 Plant and Equipment.

(f) Intangible assets

Intangible assets represent identifiable non-monetary assets without physical substance such as computer software and development costs.

Intangible assets are initially recognised at cost. Subsequently, intangible assets with finite useful lives are carried at cost less accumulated amortisation and accumulated impairment losses. Costs incurred subsequent to initial acquisition are capitalised when it is expected that additional future economic benefits will flow to the Authority.

(g) Depreciation and amortisation

Assets with a cost in excess of $100 (2015-16 and 2014-15) are capitalised and depreciation has been provided on depreciable assets so as to allocate their cost or valuation over their estimated useful lives using the diminishing value basis. Estimates of the remaining useful lives and depreciation method for all assets are reviewed at least annually. This depreciation charge is not funded by the Department of Health and Human Services.

The following table indicates the expected useful lives of non-current assets on which the depreciation charges are based.

<table>

</tbody>
</table>
### ACCOUNTING POLICIES (continued)

#### (h) Net losses on non-financial assets

Net loss on non-financial assets includes realised and unrealised gains and losses from revaluations, impairments and disposals of all physical assets and intangible assets.

Any gain or loss on the sale of non-financial assets is recognised at the date that control of the asset is passed to the buyer and is determined after deducting from the proceeds the carrying value of the asset at that time.

#### (i) Payables

These amounts consist predominantly of liabilities for goods and services. Payables are initially recognised at fair value, and then subsequently carried at amortised cost and represent liabilities for goods and services provided to the Authority prior to the end of the financial year that are unpaid, and arise when the Authority becomes obliged to make future payments in respect of the purchase of these goods and services. The normal credit terms are Net 30 days.

#### (j) Provisions

Provisions are recognised when the Authority has a present obligation, the future sacrifice of economic benefits is probable, and the amount of the provision can be measured reliably.

The amount recognised as a provision is the best estimate of the consideration required to settle the present obligation at reporting date, taking into account the risks and uncertainties surrounding the obligation. Where a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows.

#### (k) Goods and services tax (GST)

Income, expenses and assets are recognised net of the amount of associated GST, unless the GST incurred is not recoverable from the ATO. In this case it is recognised as part of the cost of acquisition of the asset or as part of the expense.

Receivables and payables are stated inclusive of the amount of GST receivable or payable. The net amount of GST recoverable from the ATO is included with other receivables in the balance sheet.

Cash flows are presented on a gross basis. The GST components of cash flows arising from investing activities which are recoverable from the ATO are presented as operating cash flow. Commitments and contingent liabilities are presented on a gross basis.

#### (l) Employee benefits

**Wages and salaries and annual leave**

Liabilities for wages and salaries, including non-monetary benefits, and annual leave expected to be settled within 12 months of the reporting date are recognised in the provision for employee benefits in respect of employees’ services up to the reporting date, classified as current liabilities and measured at nominal values.

Those liabilities that the Authority do not expect to be settled within 12 months are recognised in the provision for employee benefits as current liabilities, measured at the present value of the amounts expected to be paid when the liabilities are settled using the remuneration rate expected to apply at the time of settlement.

**Non-current liability — conditional long service leave (LSL)**

Conditional LSL representing less than 10 years of continuous service is disclosed as a non-current liability because there is an unconditional right to defer the settlement of the entitlement until the employee has completed the requisite years of service. Conditional LSL is required to be measured at present value. Consideration is given to expected future wage and salary levels, experience of employee departures and periods of service. Expected future payments are discounted using interest rates of Australian Government Securities.

### Superannuation

**Defined contribution plans**

Contributions to defined contribution superannuation plans are expensed when incurred.

The name and details of the major employee superannuation funds and contributions made by the Authority are as follows:

<table>
<thead>
<tr>
<th>Fund</th>
<th>Contributions paid or payable for the year</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>Other</td>
<td>25,598</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>82,502</strong></td>
</tr>
</tbody>
</table>

### Financial instruments

**Financial assets and liabilities at fair value through profit or loss**

Financial assets are categorised as fair value through profit or loss at trade date if they are classified as held for trading or designated as such upon initial recognition. Financial instrument assets are designated at fair value through profit or loss on the basis that the financial assets form part of a group of financial assets that are managed by the Authority based on their fair values, and have their performance evaluated in accordance with documented risk management and investment strategies.

Financial instruments at fair value through profit or loss are initially measured at fair value and attributable transaction costs are expensed as incurred. Subsequently, any changes in fair value are recognised in the net result as other comprehensive income, as required by AASB 139 para 55. Any dividend or interest on a financial asset is recognised in the net result for the year.

Financial assets and liabilities at fair value through profit or loss include the majority of the Authority’s equity investments, debt securities and borrowings.

**Reclassification of financial instruments at fair value through profit or loss**

Financial instrument assets that meet the definition of receivables may be reclassified out of the fair value through profit or loss category into the receivables category, where they would have met the definition of receivables had they not been required to be
NOTE 1: STATEMENT OF SIGNIFICANT ACCOUNTING POLICIES (continued)

(m) Financial instruments (continued)

classified as fair value through profit or loss. In these cases, the financial instrument assets may be reclassified out of the fair value through profit or loss category, if there is the intention and ability to hold them for the foreseeable future or until maturity.

**Receivables**

Receivables are financial instrument assets with fixed and determinable payments that are not quoted on an active market. These assets are initially recognised at fair value plus any directly attributable transaction costs. Subsequent to initial measurement, receivables are measured at amortised cost using the effective interest method, less any impairment.

Receivables include cash and deposits (refer to Note 1(c)), trade receivables and other receivables, but not statutory receivables.

**Financial liabilities at amortised cost**

Financial instrument liabilities are initially recognised on the date they are originated. They are initially measured at fair value plus any directly attributable transaction costs. Subsequent to initial recognition, these financial instruments are measured at amortised cost with any difference between the initial recognised amount and the redemption value being recognised in profit or loss over the period of the interest-bearing liability, using the effective interest rate method.

Financial instrument liabilities measured at amortised cost include all of the Authority’s contractual payables, deposits held and advances received, and interest-bearing arrangements other than those designated at fair value through profit or loss.

(n) Leases

**Operating leases**

Operating lease payments, including any contingent rentals, are recognised as an expense on a straight line basis over the lease term, except where another systematic basis is more representative of the time pattern of the benefits derived from the use of the leased asset.

**Lease incentives**

All incentives for the agreement of a new or renewed operating lease shall be recognised as an integral part of the net consideration agreed for the use of the leased asset, irrespective of the incentive’s nature or form or the timing of payments.

In the event that lease incentives are received to enter into operating leases, such incentives are recognised as a liability. The aggregate benefits of incentives are recognised as a reduction of rental expense on a straight-line basis, except where another systematic basis is more representative of the time pattern in which economic benefits from the leased asset are consumed.

The cost of leasehold improvements is capitalised as an asset and depreciated over the remaining term of the lease or the estimated useful life of the improvements, whichever is the shorter.

(o) Income recognition

Income is recognised in accordance with AASB 118 Revenue and is recognised as to the extent it is earned. Unearned income at reporting date is reported as income received in advance.

Amounts disclosed as revenue are, where applicable, net of returns, allowances and duties and taxes.

**Government grants**

Grants are recognised as income when the Authority gains control of the underlying assets in accordance with AASB 1004 Contributions. For reciprocal grants, the Authority is deemed to have assumed control when the performance has occurred under the grant.

For non-reciprocal grants, the Authority is deemed to have assumed control when the grant is received or receivable. Conditional grants may be reciprocal or non-reciprocal depending on the terms of the grant.

**Donations and other bequests**

Donations and bequests are recognised as revenue when received. If donations are for a special purpose, they may be appropriated to a reserve, such as the specific restricted purpose reserve.

**Interest revenue**

Interest revenue is recognised as received.

(p) Project expenses

Project expenses relate to the conduct of specifically funded activities of a defined nature and duration. Project expenses are recognised as expenses in the reporting period in which they are incurred.

(q) Other expenses

Other expenses are recognised as an expense in the reporting period in which they are incurred.

(r) Rounding off

All amounts shown in the financial statement are expressed to the nearest dollar.

(s) Comparatives

Where necessary the previous year’s figures have been adjusted to facilitate comparisons. In Note 13 Provisions, prior year long service leave provisions have been restated to correctly reflect current and non-current provisions. This change has the effect of increasing short term provisions on the balance sheet by $14,768 and decreasing long term provisions by $14,768. This restatement has no impact on the prior year financial result.

(t) Contributed capital

Consistent with Australian Accounting Interpretation 1038 Contributions by Owners Made to Wholly-Owned Public Sector Entities and FRD 119 Contributions by Owners, appropriations for additions to the net asset base have been designated as contributed capital. Other transfers that are in the nature of contributions or distributions that have been designated as contributed capital are also treated as contributed capital.

(u) Commitments

Commitments for future expenditure include operating and capital commitments arising from contracts. These commitments are disclosed by way of a note (refer to note 18) at their nominal value and are inclusive of GST payable. In addition, where it is considered appropriate and provides additional relevant information to users, the net present values of significant individual projects are stated. These future expenditures cease to be disclosed as commitments once the related liabilities are recognised in the balance sheet.

(v) Contingent assets and contingent liabilities

Contingent assets and contingent liabilities are not recognised in the balance sheet, but are disclosed by way of note and, if quantifiable, are measured at nominal value. Contingent assets and contingent liabilities are presented inclusive of GST receivable or payable respectively.

(w) New accounting standards and interpretations

Certain accounting standards and interpretations have been published that are not mandatory for 30 June 2016 reporting period. These standards are not expected to have any material impact for future financial reporting periods and the Authority has not and does not intend to adopt any of these standards early.
### Notes to the financial statements for the year ended 30 June 2016

#### NOTE 2: REVENUE

**Operating activities**
- Government grants – Victorian Government: $750,954, $738,906
- Government grants – in kind – Victorian Government: $3,018, $2,000
- Government grants – Commonwealth Government: $207,585, $163,415
- Other: $22,842, $31,489

**Other income**
- Interest Income: $345, $439

#### NOTE 3: EXPENSES FROM ORDINARY ACTIVITIES

Profit/(loss) from ordinary activities has been determined after the following expenses:

**(a) Employee benefits**
- Salaries and wages and on-costs: $504,797, $495,540
- Superannuation: $49,053, $43,801
- Staff amenities: $434, $403
- Staff development and seminars: $8,136, $4,503

**Total employee benefits**: $562,420, $544,247

**(b) Supplies and services**
- Accounting: $13,721, $20,590
- Audit fees: $6,700, $6,500

NOTE 5: SUPERANNUATION

Details in relation to superannuation funds are as follows:

- The Authority contributed on behalf of its employees and directors eligible for remuneration during the year ended 30 June 2016 to various funds and notably First State Super (Health Super), Vic Super, and Hesta, all being complying funds under the Superannuation Industry (Supervision) Act 1993.
- No loans exist between the Authority and these superannuation funds.
- The amount of total contributions by the Authority to these superannuation funds for the year amounted to $82,502 (2015: $77,390) with employer statutory requirements specifying that contributions of the Authority are based on a percentage of the employee’s salary. During the period these contributions were at the rate of 9.50% of gross salaries. Contributions made by the Authority in accordance with employer obligations and excluding salary sacrifice arrangements were $53,005 (2015: $48,214).

<td>30,383</td>
<td>-</td>
<td>30,383</td>
</tr>
</tbody>
</table>

*Classified in accordance with the fair value hierarchy

There have been no transfers between levels during the period.

Plant and equipment

Plant and equipment is held at carrying value (depreciated cost). When plant and equipment is specialised in use, such that it is rarely sold other than as part of going concern, the depreciated replacement cost is used to estimate the fair value. Unless there is market evidence that current replacement costs are significantly different from the original acquisition cost, it is considered unlikely that depreciated replacement cost will be materially different from the existing carrying value.

There were no changes in valuation techniques throughout the year to 30 June 2016.

For all assets measured at fair value, the current use is considered the highest and best use.
Notes to the financial statements for the year ended 30 June 2016

NOTE 16: RELATED PARTY TRANSACTIONS

(a) Responsible minister

The Hon Jill Hennessy, Minister for Health, was the responsible minister for the reporting period.

Remuneration of the ministers is disclosed in the financial report of the Department of Premier and Cabinet. At the reporting date there were no related party transactions between the Authority and responsible persons or key management personnel.

(b) Authority members

The names of authority members at the date of this report are:

Ms K Mander (Chairperson)                                      Chief Executive Officer
Ms N Mollard
Mr F Jackson
Ms R McDougall
Ms K Lai
Mr R Carson
Ms L Burns

(c) Remuneration of responsible persons

The number of responsible persons are shown in their relevant income bands

<table>

Total remuneration received or due and receivable by responsible persons from the reporting entity amounted to:

| Total remuneration received or due and receivable by responsible persons from the reporting entity amounted to: | 221,364 | 202,622 |

(d) Transactions with related parties

There were no transactions with related parties during the year.
**Notes to the financial statements for the year ended 30 June 2016**

**NOTE 17: FINANCIAL INSTRUMENTS**

(a) **Financial risk management**

The Authority’s financial instruments consist of deposits with banks, accounts receivable and payable. The Authority does not have any derivative instruments at 30 June 2016 (2015: NIL).

Details of the significant accounting policies and methods adopted, including the criteria for recognition, the basis for measurement, and basis on which income and expenses are recognised, in respect of each class of financial asset and financial liability are disclosed in Note 1 to the financial statements.

</tbody>
</table>

**Risk management**

i. **Treasury risk management**

The Authority members meet on a regular basis to analyse interest rate exposure and to evaluate treasury management strategies in the context of most recent economic conditions and forecasts.

ii. **Financial risks**

The main risk the Authority is exposed to through its financial instruments are interest rate risk, liquidity risk and credit risk.

**Liquidity risk**

The Authority manages liquidity risk by monitoring forecast cash flows and ensuring that there are sufficient funds to meet expenditure commitments.

**Credit risk**

The maximum exposure to credit risk, excluding the value of any collateral or other security, at balance date to recognised financial assets, is the carrying amount, net of any provisions for impairment of those assets, as disclosed in the balance sheet and notes to the financial statements. The Authority does not have any material credit risk exposure to any single receivable or group of receivables under financial instruments entered into by the Authority.

**Interest rate risk**

The Authority is not exposed to any material interest rate risk as it has no interest bearing debt and only derives interest from cash balances in its operating bank account. The rate of interest derived is floating with market rates. The Authority has performed an interest rate sensitivity analysis relating to its exposure to interest rate risk at balance date. This sensitivity analysis demonstrated the effect on the current year results and equity which could result from a change in this risk is not material.

(b) **Interest rate risk**

The Authority is not exposed to any material interest rate risk.

The Authority’s exposure to interest rate risk, which is risk that a financial instrument’s value will fluctuate as a result of changes in market interest rates and the effective weighted average interest rates on classes of financial assets and financial liabilities, is as follows:

<table>
<thead>
<tr>
<th>Weighted average effective interest rate</th>
<th>Interest bearing floating interest rate</th>

</tbody>
</table>
Notes to the financial statements for the year ended 30 June 2016

NOTE 17: FINANCIAL INSTRUMENTS (continued)

(b) Interest rate risk (continued)

Trade and other payables are expected to be settled as follows:

<table>
<thead>
<tr>
<th>Notes</th>
<th>2016 $</th>
<th>2015 $</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 90 days</td>
<td>44,066</td>
<td>46,768</td>
</tr>
<tr>
<td></td>
<td>44,066</td>
<td>46,768</td>
</tr>
</tbody>
</table>

(c) Net fair values

For assets and other liabilities the net fair value approximates their carrying value. No financial assets and financial liabilities are readily traded on organised markets in standardised form. Financial assets where the carrying amount exceeds net fair values have not been written down as the Authority intends to hold these assets to maturity.

The aggregate net fair values and carrying amounts of financial assets and financial liabilities are disclosed in the balance sheet and in the notes to the financial statements.

Details of aggregate net fair value and carrying amounts of financial assets and financial liabilities at balance date:

</tr>
</tbody>
</table>

(d) Sensitivity analysis

Taking into account past performance, future expectations, economic forecasts, and management’s knowledge and experience of the financial markets, the Authority believes the following movements are ‘reasonably possible’ over the next 12 months.

- A parallel shift of +1% and -1% in market interest rates (AUD) from year end rates of 0.096%.
- A parallel shift of +1% and -1% in inflation rate from year end rates of 1.0%.

The following table discloses the impact on net operating result and equity for each category of financial instrument held by the Authority at year end as presented to key management personnel, if changes in risk occur.

Notes to the financial statements for the year ended 30 June 2016

NOTE 18: CAPITAL AND LEASING COMMITMENTS

(a) Capital commitments
   The Authority had no capital commitments at 30 June 2016 (2015: NIL).

(b) Lease commitments
   The Authority had no lease commitments at 30 June 2016 (2015: NIL).

(c) Other commitments
   The Authority had no other significant commitments at 30 June 2016 (2015: NIL).

NOTE 19: CONTINGENT LIABILITIES

There are no contingent liabilities at 30 June 2016 (2015: NIL).

NOTE 20: ECONOMIC DEPENDENCY

The Authority is dependent upon State of Victoria, via the Department of Health and Human Services, for the funding of a significant proportion of its operations.

NOTE 21: EVENTS AFTER THE BALANCE SHEET DATE

There are no events after the balance sheet date that would affect the financial report.

NOTE 22: SEGMENT REPORTING

The Authority functions as described in Section 131 of the Health Services Act 1988 on behalf of the Victorian public health sector.

NOTE 23: AUTHORITY DETAILS

The registered office and principal place of business of the Authority is:

Victorian Assisted Reproductive Treatment Authority
Level 30, 570 Bourke Street
Melbourne VIC 3000

NOTE 24: ASSISTED REPRODUCTIVE TREATMENT ACT 2008

The Infertility Treatment Authority was established under the Infertility Treatment Act 1995. On 1 January 2010 upon the implementation of the Assisted Reproductive Treatment Act 2008, the Infertility Treatment Authority became the Victorian Assisted Reproductive Treatment Authority.
INDEPENDENT AUDITOR’S REPORT

To the Board Members, Victorian Assisted Reproductive Treatment Authority

The Financial Report

I have audited the accompanying financial report for the year ended 30 June 2016 of the Victorian Assisted Reproductive Treatment Authority which comprises the comprehensive operating statement, balance sheet, statement of changes in equity, cash flow statement, notes comprising a summary of significant accounting policies and other explanatory information, and the accountable officer’s, member of responsible body’s and chief finance officer’s declaration.

The Board Member’s Responsibility for the Financial Report

The Board Members of the Victorian Assisted Reproductive Treatment Authority are responsible for the preparation and fair presentation of the financial report in accordance with Australian Accounting Standards, and the financial reporting requirements of the Financial Management Act 1994, and for such internal control as the Board Members determine is necessary to enable the preparation and fair presentation of the financial report that is free from material misstatement, whether due to fraud or error.

Auditor’s Responsibility

As required by the Audit Act 1994, my responsibility is to express an opinion on the financial report based on the audit, which has been conducted in accordance with Australian Auditing Standards. Those standards require compliance with relevant ethical requirements relating to audit engagements and that the audit be planned and performed to obtain reasonable assurance about whether the financial report is free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial report. The audit procedures selected depend on judgement, including the assessment of the risks of material misstatement of the financial report, whether due to fraud or error. In making those risk assessments, consideration is given to the internal control relevant to the entity’s preparation and fair presentation of the financial report in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity’s internal control. An audit also includes evaluating the appropriateness of the accounting policies used and the reasonableness of accounting estimates made by the Board Members, as well as evaluating the overall presentation of the financial report.

I believe that the audit evidence I have obtained is sufficient and appropriate to provide a basis for my audit opinion.
Independent Auditor's Report (continued)

Independence

The Auditor-General's independence is established by the Constitution Act 1975. The Auditor-General is not subject to direction by any person about the way in which his powers and responsibilities are to be exercised. In conducting the audit, I and my staff and delegates have complied with the applicable independence requirements of the Australian Auditing Standards and relevant ethical pronouncements.

Opinion

In my opinion, the financial report presents fairly, in all material respects, the financial position of the Victorian Assisted Reproductive Treatment Authority as at 30 June 2016 and its financial performance and its cash flows for the year then ended in accordance with applicable Australian Accounting Standards, and the financial reporting requirements of the Financial Management Act 1994.

MELBOURNE
9 September 2016

Dr Peter Frost
Acting Auditor-General
### Glossary

The terminology used in this report is fully explained below:

<table>
<thead>
<tr>
<th><strong>Term</strong></th>
<th><strong>Definition</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Age at first treatment</strong></td>
<td>Age is based on the cycle date – either the first date where FSH/stimulation drug is administrated, or the date of last menstrual period (LMP) for unstimulated cycles (including natural fresh cycles and thaw cycles).</td>
</tr>
<tr>
<td><strong>AI (artificial insemination) with partner sperm</strong></td>
<td>A procedure of transferring sperm without also transferring an egg into the vagina, cervical canal or uterus of a woman.</td>
</tr>
<tr>
<td><strong>AI with donor sperm</strong></td>
<td>Artificial insemination with donor sperm.</td>
</tr>
<tr>
<td><strong>Clinical pregnancy</strong></td>
<td>Any type of pregnancy except that diagnosed only by measuring levels of human chorionic gonadotrophin. This definition includes ectopic pregnancy, blighted ovum and spontaneous abortion.</td>
</tr>
<tr>
<td><strong>Egg retrieval</strong></td>
<td>Procedure undertaken in an attempt to collect egg(s) from a woman.</td>
</tr>
<tr>
<td><strong>Embryo</strong></td>
<td>A live embryo that has a human genome or an altered human genome and that has been developing for less than eight weeks since the appearance of two pronuclei or the initiation of its development by other means.</td>
</tr>
<tr>
<td><strong>Fertilisation</strong></td>
<td>Penetration of an egg by sperm. Only egg(s) with two pronuclei will be reported.</td>
</tr>
<tr>
<td><strong>FSH stimulated cycle</strong></td>
<td>A treatment cycle in which the woman’s ovaries are stimulated with superovulatory drugs, excluding clomiphene citrate, to produce more than one egg.</td>
</tr>
<tr>
<td><strong>Gamete</strong></td>
<td>An egg or sperm.</td>
</tr>
<tr>
<td><strong>ICSI (intra cytoplasmic sperm injection)</strong></td>
<td>ICSI is a micromanipulation technique where a single sperm is injected into the inner cellular structure of an egg. For the purposes of this report, ICSI treatment cycles are included in the total of IVF treatment cycles.</td>
</tr>
<tr>
<td><strong>IVF (in vitro fertilisation)</strong></td>
<td>Co-incubation of sperm and egg outside the body of a woman. It does not necessarily result in the formation of an embryo which is fit for transfer. Intra cytoplasmic sperm injection (ICSI) may also be used as part of an IVF procedure.</td>
</tr>
<tr>
<td><strong>Liveborn baby</strong></td>
<td>A fetus delivered with signs of life after complete expulsion or extraction from its mother, beyond 20 completed weeks of gestational age.</td>
</tr>
<tr>
<td><strong>Live birth</strong></td>
<td>A birth event in which a live born baby is delivered. Live births are counted as birth events, e.g. a twin or triplet live birth is counted as one birth event.</td>
</tr>
<tr>
<td><strong>Not FSH stimulated/Unstimulated cycle</strong></td>
<td>A treatment cycle where no super-ovulatory drugs are used or where only clomiphene citrate is used.</td>
</tr>
<tr>
<td><strong>Number of fetal heartbeats</strong></td>
<td>Number of fetal hearts seen by ultrasonography.</td>
</tr>
<tr>
<td><strong>PGD (preimplantation genetic diagnosis)</strong></td>
<td>PGD is a genetic test for embryos designed to reduce the risk of a person or couple passing on their genetic or chromosomal disorder to their child.</td>
</tr>
<tr>
<td><strong>PGS (preimplantation genetic screening)</strong></td>
<td>PGS is a scientific test used to screen for embryos which do not have the normal number of chromosomes (46 chromosomes).</td>
</tr>
<tr>
<td><strong>Registered ART provider</strong></td>
<td>A place in respect of which registration under Part 8 of the Assisted Reproductive Treatment Act 2008 is in force.</td>
</tr>
<tr>
<td><strong>Surrogacy</strong></td>
<td>An arrangement whereby a woman is treated with an embryo created from gametes from the commissioning parent(s) or donor eggs and sperm. She carries the pregnancy with the intention or agreement that the offspring will be parented by the commissioning parent(s).</td>
</tr>
<tr>
<td><strong>Thaw cycle</strong></td>
<td>Cryopreserved/frozen eggs, sperm or embryos must be thawed prior to transfer. A thaw cycle commences with the removal of frozen embryos from storage in order to be thawed and then transferred.</td>
</tr>
<tr>
<td><strong>Transfer</strong></td>
<td>The procedure of placing embryos or eggs and sperm into the body of a woman.</td>
</tr>
<tr>
<td><strong>Women in treatment</strong></td>
<td>From 1 January 2010, women in treatment can include women in heterosexual or same-sex relationships or single women. All women must be eligible for treatment as outlined in Section 10 of the Assisted Reproductive Treatment Act 2008. Before 2010, women were required to be eligible for treatment under Section 8 of the Infertility Treatment Act 1995.</td>
</tr>
